PROJECTS

- **Instagram Clone** - An Instagram clone built with the MERN (MongoDB, Express, React, Node.js) stack. User can register for an account, create posts, store images to the database, follow other users, and see other users' posts

- **Realtime Chat App** - A real time chat application built with React that allows users to send and receive real-time messages. Firebase was used for user authentication and storing user messages. User can register for an account, search other users by username, send and receive real-time message

- **YouTube Draggable** - A React app that allows users to synchronously play up to 4 draggable and resizable YouTube videos
